***Allowance of Application # 09/449,773***

1. The following communication is in response to applicant's amendment received 14-September-2005.

***Reasons for Allowance***

2. The following is an Examiner's Statement of Reasons for the indication of allowable subject matter. The instant application is directed to a non-obvious improvement over the information described in the related prior art, specifically the article authored by Yu et al., the improvement comprising a system and method for monitoring engine performance, wherein engine operating conditions are supplied to an engine model and engine sensor values are supplied to an engine component quality estimator, and wherein a fault detection based on the outputs of the engine model and estimator is generated, whereby the estimator outputs are supplied to the engine model. This patentable distinction is included in each of the independent claims, nos. 1, 12, and 18. The art of record, either individually or in combination, fails to teach, suggest, or render obvious the useful, concrete and tangible <engine performance monitoring system> having the corresponding structure which is disclosed in the specification and equivalents thereof at least at page 2, line 16 through page 8, line 23, and Figures 1-7. In view of the foregoing, the claims of the present application are found to be patentable over the prior art.
